By *Corne & Pointon*

**Product Type:** Softcover

**Subject Area:** Medicine - Pulmonary & Respiratory Medicine

The book covers the range of common radiological problems the junior doctors are faced with starting with the appearance of the film, e.g. showing generalised shadowing or a coin lesion. It gives advice on how to examine an X-ray, how to check its technical quality and how to identify where the lesion is. **Echo Made Easy International Edition , 2<sup>nd</sup> Edition**

**By** *Kaddoura*

**Product Type:** Softcover

**Subject Area:** Medicine - Cardiology & Cardiovascular Medicine

This best-selling and highly-praised book provides a practical and clinically useful introduction to echo "much of which is easy" for those who will be using, requesting and possibly interpreting it in the future. The book is aimed particularly at doctors in training and medical students. It has been proved of great use to other groups, including qualified physicians, general practitioners, cardiac technicians, nurses and paramedics.

**ISBN-13:**  
9780443103643  
**Publication Date:**  
08/01/2009

In the book the author explains the echo techniques available, what an echo can and cannot give, and "importantly" puts echo into a clinical perspective. It is by no means intended as a complete textbook of echo and some aspects are far beyond its scope (e.g., complex congenital heart disease and paediatric echo).

The sections are ordered with the techniques most often used to diagnose a particular

clinical problem explained first. The final chapter deals with special clinical situations.

Unquestionably achieves the author's aim and does so with consummate ease.
